

It's not open without U !

By Enigma Team

Data-driven, a lot of problems !

- At first, no data !
- After, messy data !
- Now we have data, **STILL**, it is unclear for the normal citizen
- Finally, well visualized data, **BUT AGAIN**, how can it be trusted ?

Those are the questions we tried to answer during the last 24h

Hopefully we did !

No data

The data is unstructured

⇒ Processed

⇒ Cleaned

⇒ Normalized

messy data

Still unclear !

No point of having data if we can't get informations out of it.

Our UI:

- Graphics driven
- Understandable language (for everyone)
- Intuitive

⇒ **Statistics:** Budgets/Projects/Years

Is it clear enough ?

- Interact & investigate more
- Contribute to enhance the quality of data (crowdsourcing)
- Review, constructive feedback & critics

A thankful efforts, but, TRUST !?

How can we guarantee that:

- Data can not be changed
- It can be accessible, despite, time and location
- My feedback (contribution) lives forever

⇒ Blockchain, one ring to rule them all !

**Thank you !
Any questions !**
